Sherpa Women Project
€1 per unit sold of the preselected nine products with the Sherpa Women label is donated to the Sherpa Women project in Nepal. Launched by SALEWA in close dialogue with local initiatives in 2011, this long-term project aims to empower Nepalese women to work in the Himalayan mountaineering and trekking tourism business. Together with local partners and organizations, SALEWA engages in the training of female mountain guides. The practical training in the mountains and the theoretical guiding lessons are supported by English language courses and intercultural exchange programs. Sherpa Women is only the name but the project is dedicated and open to all Nepali women regardless of their culture and ethnicity.

PFC-free Durable Water Repellents (DWR)
PFCs are per-and polyfluorinated chemicals that are often used in outdoor gear due to their extreme water-, dirt-, and oil-repellent functions while at the same time ensuring breathability. Until a few years ago, these chemicals were the most broadly used. Only recently studies found about their persistence in the environment and their potential to cause health hazards. Since the production year 2014, SALEWA replaced all long-chain PFOAs, also known as C8 chemicals, with short-chain C6 PFCs (which are considered to be less resistant to environmental degradation) in all our garments, tents and sleeping bags. As a result, all these products are PFOA-free and at a minimum, C6-based DWR treatments are used. In SALEWAs technical styles this performance is crucial to prevent fabric saturation and protect users to stay warm and dry in extreme conditions. However, the use of C6s is only seen as an interim stage until comparable alternatives that ensure the same performance are available on the market. We are continuously investing to further reduce the use of C6-chemicals in our fabrics and increase the number of PFC-free products significantly without compromising on user-safety performance. Our current PFC-free (no use of C6 and C8 chemicals) durable water repellant finishing's can be identified by the BIONIC FINISH® ECO label and the PFC-free icon. Please note that contamination of PFCs can not be excluded.

Fair Wear Foundation Member
SALEWA has been a member of the Fair Wear Foundation (FWF) since September 2013. This independent, non-profit organisation works with companies and factories to improve labour conditions of the garment workers. Members must adhere to the FWF Code of Labour Practices, which contains eight internationally recognized labour standards derived from ILO Conventions and the UN's Declaration on Human Rights. They are: free choice of employment, no discrimination in employment, no exploitation of child labour, freedom of association and the right to collective bargaining, payment of a living wage, no excessive working hours, safe and healthy working conditions and a legally binding employment relationship. Members of FWF must comply with this Code of Labour Practices. Progress in implementing the code is evaluated by FWF each year through a so-called 'Brand Performance Check', the result of which is documented and transparently published on the FWF and SALEWA websites.

bluesign® System Partner
SALEWA has been an official bluesign® system partner since summer 2011 and is continuously increasing the share of bluesign® certified fabrics. The independent bluesign® system specializes in reducing the environmental impact throughout the entire textile supply chain. This is achieved by a holistic Input Stream Management approach that prevents the use of problematic substances at the beginning of the manufacturing process, before they enter the production cycle. The result is a clean process with sustainable ingredients that reduces the negative impacts these chemicals would otherwise have on the environment and people. bluesign® monitors the on-site implementation at all levels of the textile production chain, based on the five principles resource productivity, air emissions, occupational health and safety, water emissions and consumer protection. Following the most strictest international environmental standards, it amounts to a global seal of approval for the protection of people, resources and the environment.

RESPONSIBLE DOWN STANDARD - RDS
In recent years, animal rights activists have increasingly uncovered practices that are at odds with the welfare of ducks and geese. In particular, the raising of animals for gavage-based foie gras production and live plucking have drawn their ire given that such practices are often hard to uncover due to vast and convoluted supply chains. SALEWA joins them in rejecting these practices and is committed to a fair and proper handling of all natural resources available to us. Consequently, we carefully ensure that our down jackets and sleeping bags are only filled with high-quality, ethically harvested down. To ensure this in a transparent and credible fashion while eradicating unnecessary animal suffering from the supply chain, SALEWA purchases exclusively down that comes with RDS (Responsible Down Standard) certification. The RDS was the result of joint efforts and commitment by various stakeholders; especially inputs from suppliers, farmers, animal welfare organizations (Four Paws, PETA, German Animal Welfare Association) and industry experts were essential. It was published in 2014 and is currently the most comprehensive, independent certified animal welfare and traceability standard worldwide. It certifies the absence of live plucking and gavage but is also aimed at guaranteeing the respect for general animal welfare legislation and traceability. Animal husbandry is strictly checked and monitored from hatching to the harvesting of down.

GORE-TEX® fabrics lead the way in waterproof protection, breathability and durability for technical outdoor apparel.

WATER COLUMN: 28 000 mm
BREATHABILITY: <6 RET

Garments made with **GORE-TEX®** product technology are durably waterproof, windproof and highly breathable.

GORE-TEX® product technology provides reliable weather protection and maximum comfort for a wide range of activities. These garments keep your body dry by allowing perspiration vapour to escape, so you remain cool during activity and warm during rest breaks and afterwards.

The GORE-TEX® membrane is completely water- and windproof and at the same time allows sweat to pass through it. The membrane is formed by pores (over 9 billion pores per square inch) which are 20,000 times smaller than a drop of water, but 700 times larger than a water vapour molecule preventing water penetration and helping the skin breathe. Resistance tested in the lab, simulating the most extreme atmospheric conditions.

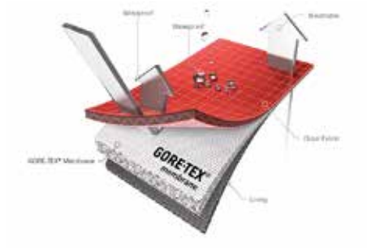
Available in a 2-layer and 3-layer construction:

2-LAYER CONSTRUCTION
Garments made with 2-layer GORE-TEX® fabric are the versatile solution for style, comfort and protection against the elements.

3-LAYER CONSTRUCTION
Garments made with 3-layer GORE-TEX® fabric offer added durability without extra bulk. The reduced number of layers required mean less weight and more freedom of movement.

We also use GORE-TEX Stretch - a 3L fabric in our mountaineering line.

BENEFITS:
- durably waterproof and windproof
- very breathable
- maximum comfort and protection for a wide range of activities and weather conditions
- everyday versatility



GORE-TEX® Pro

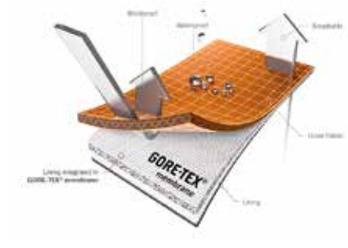
WATER COLUMN: 28 000 mm
BREATHABILITY: <6 RET

Garments made with **GORE-TEX® Pro** product technology are durably waterproof, windproof and extremely breathable. Their high performing membrane and robust face fabrics are rugged and hard-wearing. GORE-TEX® Pro is ideal for extended mountaineering use in extreme weather.

GORE-TEX® Pro fabric's construction keeps your body dry by reducing the accumulation of sweat, so you remain cool during aerobic activities and warm during rest breaks and after activity has ceased. Made to meet the high demands of (ski) mountaineers, freeriders, mountain guides and serious outdoor enthusiasts, garments made with 3-layer GORE-TEX® Pro fabric are engineered with added durability to withstand abrasion in rugged environments while protecting against extreme and unpredictable conditions with frequent work-rest cycles.

GORE-TEX® Pro products for mountain sport activities use a 100 % ePTFE-based multilayer membrane system with a unique microstructure. The membrane is durably bonded to both the outer material and a specially developed robust inner lining. Outer materials have to meet strict performance criteria (denier ≥40) and are given a thin, low denier Gore Micro Grid Backer technology which enhances breathability and reduces weight.

BENEFITS:
- durably waterproof and windproof
- breathable
- extremely rugged and durable



GORE-TEX® Active

WATER COLUMN: 28 000 mm
BREATHABILITY: < 3 RET

GORE-TEX® Active product technology apparel is durably waterproof, windproof and extremely breathable – it's the most breathable fabric in the GORE-TEX® product family.

Designed to meet the aerobic demands of alpine athletes, GORE-TEX® Active fabrics are ideal for highly aerobic done-in-a-day activities, even in bad weather. They are lightweight and soft, with excellent next-to-skin comfort, thanks to reliable moisture management. The fabric's construction keeps your body dry by reducing the accumulation of sweat, so you stay cool during activity and warm during rest breaks and afterwards.

GORE-TEX® Active product technology combines a lighter, thinner GORE-TEX® membrane with a fine ≤40 denier performance textile to deliver a comprehensive 3-layer solution. On the liner side, a proprietary lamination technology integrates the backer textile directly into the GORE-TEX® membrane. It provides high moisture vapour transport.

BENEFITS:
- extremely breathable
- durably water- and windproof
- next-to-skin comfort
- lightweight
- high moisture vapour transport
- ideal for highly aerobic activities

POWERTEX is our proprietary breathable, waterproof and windproof shell fabric with a water-repellent finish.

WATER COLUMN: 5 000-10 000 mm
BREATHABILITY: 5-20 000 g/ m²/ 24h

POWERTEX is developed to provide the right combination of performance, weight, durability and comfort. It has a waterproof polyurethane-based membrane. During aerobic activities the breathable membrane transports vapour to the outside, reducing internal condensation and maintaining a comfortable wear climate.
Our POWERTEX fabrics are available in **2, 2.5, AND 3-LAYER** constructions to cover a range of different performance levels.

BENEFITS:
- waterproof
- windproof
- breathable
- durable
- abrasion-resistant
- lightweight
- packable
- excellent value for money

GORE® WINDSTOPPER®

BREATHABILITY: <13 RET

GORE® WINDSTOPPER® products are totally windproof and allow maximum breathability to protect against wind chill in cold and windy conditions, while reducing the risk of overheating when active.

Dry = warm. If perspiration stays on your skin, it eventually gets cold – and so will you. Your clothing needs to let the sweat out and keep all forms of moisture away from your skin.

WINDSTOPPER® fabrics are constructed by laminating a special membrane to a wide range of functional fabrics selected according to the final product's intended use.
In a WINDSTOPPER® laminate, the ePTFE (expanded polytetrafluorethylene) membrane is bonded to a wide range of high-performance fabrics. Depending on the application, a variety of outer fabrics and lining materials are used to create 2- and 3- layer constructions.

BENEFITS:
- totally windproof
- maximum breathability
- active fit for comfort
- suitable for a wide range of activities
- retains warmth against wind and sweat

GORE® WINDSTOPPER® PRODUCTS WITH LIGHT RAIN RESISTANCE

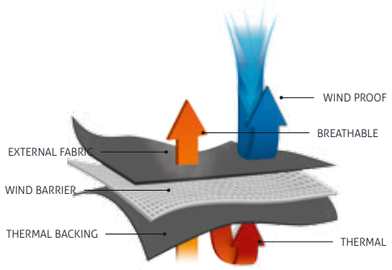
BREATHABILITY: <13 RET

GORE® WINDSTOPPER® PRODUCTS WITH LIGHT RAIN RESISTANCE are totally windproof, durably light rain resistant with maximum breathability to keep the wearer comfortable and protected in a broad range of weather conditions, including light rain when active outdoors.

GORE® WINDSTOPPER® PRODUCTS WITH LIGHT RAIN RESISTANCE provides protection in light rain for rainfall intensities of up to 2.5 mm/h – otherwise best described as drizzle. These new fabrics significantly extend the scope of conventional softshells. Robust, 3-layer garments with sealed seams are designed for outdoor sports enthusiasts who need extreme breathability but still want protection from light rain. GORE® WINDSTOPPER® products are ideal for year-round wear when the weather looks unsettled but not quite bad enough to justify packing a hard shell.

BENEFITS:
- totally windproof
- maximum breathability
- durable light rain resistance
- active fit for comfort
- wide range of activities
- retains warmth against wind and sweat

STORMWALL
SOFTSHELL TECHNOLOGY

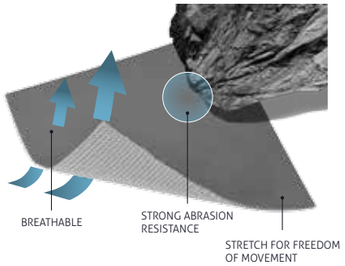


STORMWALL is our proprietary softshell fabric.

STORMWALL is windproof and highly breathable. It's designed to keep the wearer warm, dry, and comfortable while providing excellent freedom of movement. STORMWALL has a DWR finish, windproof membrane and high stretch content.

BENEFITS:
- windproof
- water-repellent
- highly breathable
- freedom of movement
- 2-way stretch
- durable
- light insulation

DURASTRETCH



DURASTRETCH is our proprietary abrasion-resistant fabric. We use it to make our hard-wearing jackets and gilets, pants and shorts, reinforcing knee and side inserts and gloves for alpine climbing, trekking and hiking. It's also lightweight and surprisingly comfortable.

DURASTRETCH fabrics are constructed of nylon (polyamide) with a high stretch content. They are lightweight, comfortable yet hardwearing and highly abrasion-resistant.

DURASTRETCH is available in a wide range of 2-way stretch and 4-way stretch versions. It is breathable and can treated with a DWR finish to make it water-repellent. Most of the DURASTRETCH fabrics we use in this collection are suitable for four-season use as their inner structure quickly wicks sweat away.
DURASTRETCH fabrics make high-quality mountaineering apparel.

DURASTRETCH ENGINEERED ECO DWR 134 BS
This version of our DURASTRETCH fabric is engineered with Cordura yarn (94% PA and 6% EA) and features prominently in our SS17 collection. It has an exceptional strength-to-weight ratio and gives a lightweight and versatile fabric with enhanced abrasion resistance without requiring patches or other fabrics. This also means fewer seams and greater wear comfort. The Cordura yarn is woven into the fabric to provide increased durability and abrasion-resistance at critical wear points. The fabric is 2-way stretch thanks to the combination of PA and EA. In addition, DURASTRETCH ENGINEERED ECO DWR is PFC free.

BENEFITS:
- abrasion-resistant
- 2-way stretch and 4-way stretch
- breathable
- light and versatile
- ideal for mountain sports where abrasion is a factor, especially alpine climbing
- many versions bluesign® certified
- high UV protection options available

INSULATION & PADDING

Down Insulation

High-performance **DOWN** is a fill and insulation material. We use it in our apparel and sleeping bags.

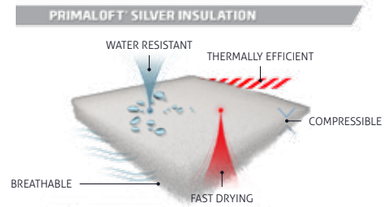
DOWN is an astonishing natural material. It has an excellent warmth-to-weight ratio, a high level of heat retention and a small, compressible pack size. No other material combines such low weight with such high thermal insulation. High-quality DOWN has decisive advantages over synthetic fill materials. DOWN is a by-product of the food & meat industry where waterfowl (ducks and geese) are raised for meat or eggs.

SALEWA only uses Responsible Down Standard (RDS) down. For more information about RDS certification, please see page 204.

BENEFITS:
- excellent warmth-to-weight ratio
- high heat retention
- packable
- lightweight
- 100% RDS down

PRIMALOFT.

PRIMALOFT® is the benchmark in performance of all synthetic insulations. It provides warmth without bulk, is water-resistant, breathable, highly compressible. Moreover, it is very light and has an exceptional feel. PRIMALOFT® keeps you warm, even when wet.



ENGINEERED FOR SUPERIOR PERFORMANCE
Four key features that differentiate PRIMALOFT® from all other synthetic insulations:
WARMER: proprietary blend of small diameter fibres trap more air to insulate
DRIER: special finishes and small diameter fibres make PRIMALOFT® insulation water-resistant
SOFTER: Finer diameter fibres and proprietary finish make PRIMALOFT® insulation ultra soft
MORE COMPRESSIBLE: Smaller diameter fibres allow PRIMALOFT® insulation to compress into a smaller space

PRIMALOFT® SILVER
A high-performance insulation with the full spectrum of features to brave the elements.

Used in a wide range of SALEWA products, PRIMALOFT® Silver Insulation offers a synergy of the excellent warmth, softness and comfort that PRIMALOFT® products are known for. PRIMALOFT® Silver absorbs less moisture from the start so you stay drier and warmer. In addition, it encourages the passage of moisture vapour to keep you from being cold or clammy. And it provides warmth without weight that packs down easily for stashing in small places.

BENEFITS:
- warmth without bulk
- water and wind resistant
- warm when wet and fast drying
- highly compressible
- breathable
- lightweight
- packable (compresses like down)
- superior softness

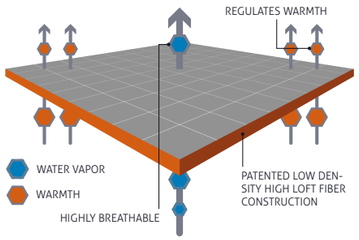
PRIMALOFT® BLACK
Warmth, softness and lightweight comfort from post-consumer recycled materials.

Used in a wide range of SALEWA products, PRIMALOFT® Black Insulation offers a synergy of the excellent warmth, softness and comfort that PRIMALOFT® products are known for.

PRIMALOFT® Black offers a high warmth-to-weight ratio that means you don't need bulk to stay warm. For breathability, it encourages the passage of moisture vapour to keep you from being cold or clammy. PRIMALOFT® Black packs down easily for stashing in small places and for layering. You get all the warmth you need with little weight and softness that feels great on your body and contributes to a flattering fit.

BENEFITS:
- warmth without bulk
- water- and wind-resistant
- warm when wet and fast drying
- highly compressible
- breathable
- lightweight
- packable (compresses like down)
- superior softness

POLARTEC® High Loft™



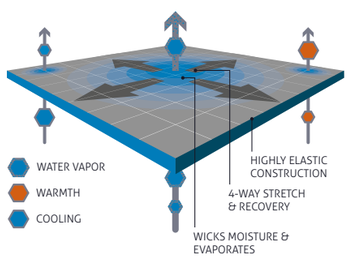
POLARTEC® High Loft™ fabrics offer maximum warmth without weight, compressibility and breathability. They are the most technically advanced of the Polartec® insulation fabrics, achieving the utmost versatility and performance under extreme conditions. This level of performance is critical when all you have is what you can carry.

POLARTEC® Thermal Pro® High Loft™ fabrics are designed primarily as a highly efficient insulation layer for use with a shell in stop-and-go activities where weight and space are limited. When worn alone, they have exceptional breathability and quick drying time, for a remarkably broad comfort range. POLARTEC® Thermal Pro® High Loft™ fabrics excel in back country pursuits like mountaineering, skiing, and ice climbing.

The key to this fabric's performance is in its unique patented construction. An open-mesh stitch promotes compressibility, increases airflow, and minimizes weight. Low density, high loft pile face and back minimizes weight but increases warmth and compressibility. The fabric maintains its loft wear after wear, for enduring warmth. POLARTEC® Thermal Pro® High Loft™ fabrics are at least 30% warmer per weight than standard fleece or the most common competitive "high loft" offering.
The naturally hydrophobic properties of POLARTEC® High Loft™ fleece repel moisture when exposed to the elements and speed up dry times. Reducing the absorbency of fabric ensures it remains lightweight and breathable, even in the most challenging environments and ever changing weather conditions.
Open mesh stitching regulates airflow and breathability during exertion for increased comfort. This durable construction allows the fabric to retain its lofted form, even after heavy use and multiple trips through the washing machine.

BENEFITS:
- warmth without weight
- highly breathable
- packable
- quick drying
- versatile
- easy-care
- various styles + weights available

POLARTEC® Power Stretch®



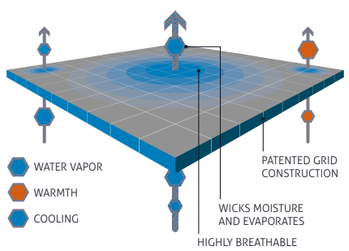
POLARTEC® Power Stretch® fabrics make moisture wicking, stretch, performance-fit base layers. Ideal for all sporting activities – from jogging to mountain climbing – where maximum freedom of movement, and clean profiles are desired. Adaptable to changing weather conditions, POLARTEC® Power Stretch® fabrics make excellent base layers and can be layered over lighter garments, or serve as warm outerwear.

POLARTEC® Power Stretch® fabrics have body-hugging 4-way stretch and are very breathable. They keep you dry when you sweat and provide warmth without weight. These are the most versatile outdoor and fitness apparel fabrics available today. Many of the fabrics feature a proprietary construction with two surfaces: a durable outer layer and a soft inner layer pulls moisture away from your skin keeping you dry, warm and comfortable. Other fabrics in the series feature compression stretch which can improve performance and reduces the chance of certain types of stop-go injuries. All the fabrics excel at handling the demands of the next-to-skin environment.

POLARTEC® Power Stretch® has the ability to retain warmth without restricting movement or agility during activities. The outer surface has a low-friction finish that reduces irritation when worn with other fabrics and increases overall abrasion resistance. The next-to-skin layer stays dry, breathable and comfortable by continuously transferring moisture vapour for rapid evaporation.
This versatility provides flexible support and warmth for reliable comfort in any fitness based activity. POLARTEC® Power Stretch® wicks moisture like a base material, but can handle direct exposure to the elements when necessary.

BENEFITS:
- resilient stretch
- wicks moisture
- highly breathable
- easy-care
- available in multiple styles and weights

POLARTEC® Power Grid™



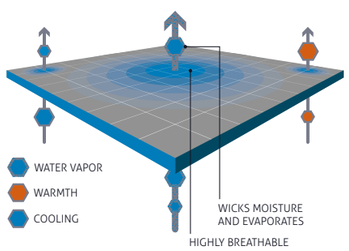
Enhanced lightweight, moisture wicking, next-to-skin base layer fabrics. **POLARTEC® Power Grid™** fabrics are highly breathable, and make ideal base layers for all sports, either as base layers or technical mid layers.

POLARTEC® Power Grid™ fabrics are designed to keep your skin dry when you sweat. All fabrics in the series feature a bi-component knit construction that uses different yarns on either side of the fabric. This creates two different surfaces: one that is optimized to move moisture away from the skin, the other to dry quickly. Superior moisture management plus the patented Power Grid™ construction ensures that athletes get the most bang from their caloric buck. These fabrics weigh less, take up less pack space, and deliver more insulation and breathability than most fabrics in their class.

Grid construction:
The raised fabric pillars on the inside create touch points for moisture pick up off the skin. The open air channels between those pillars ensure that the fabric delivers the highest levels of breathability, compressibility, and the highest warmth per fabric weight. POLARTEC® Power Grid™ fabrics deliver performance in the cleanest way possible, by leaving out what you don't need.

BENEFITS:
- superior wicking action
- grid channels reduce weight & increase warmth
- quick drying
- highly breathable
- lightweight
- easy-care

POLARTEC® Power Dry®



Moisture wicking next-to-skin base layer fabrics. **POLARTEC® Power Dry®** fabrics are highly breathable, and are ideal as the base layer for all sports, either as base layers or technical mid layers.

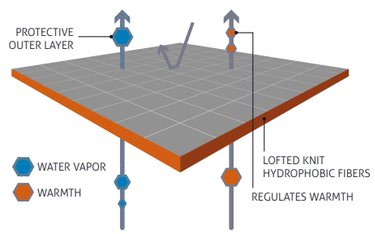
POLARTEC® Power Dry® fabrics are designed to keep your skin dry when you sweat. All fabrics in this series feature a patented bi-component knit construction
that uses different yarns on either side of the fabric. This creates two different surfaces: one that is optimized to move moisture away from the skin, the other to dry quickly.

Moisture and high relative humidity next to the skin cause discomfort. POLARTEC® Power Dry® keeps the skin dry through three complementary mechanisms:

1. The fabric is highly breathable and does not restrict the movement of moisture vapour.
2. "Touch points" on the fabric inner surface draw off the sweat. Sweat is wicked off the skin to the outside of the fabric where it spreads rapidly for evaporation.
POLARTEC® Power Dry® fabrics move at least 30% more moisture away from the skin than single component fabrics.
3. When the sweat reaches the outside of the fabric, it spreads out to many times its original surface area, enabling it to dry at least two times faster than cotton.

BENEFITS:
- superior wicking
- quick drying
- highly breathable
- lightweight
- easy-care
- available in multiple styles and weights

POLARTEC® Alpha®

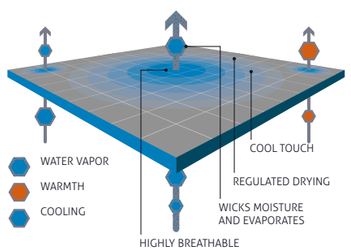


An adaptable temperature regulating insulation fabric. **POLARTEC® Alpha®** is designed primarily as a highly efficient insulation layer for use with a shell in stop-and-go activities where weight and space are limited. When worn alone, they have exceptional breathability and quick dry time, for a remarkably broad comfort range. POLARTEC® Alpha® excels in back country pursuits like mountaineering, skiing, and ice climbing.

POLARTEC® Alpha® is the latest evolution of synthetic insulation offering a rare combination of lightweight warmth and true breathability in a "puffy" style garment. Because POLARTEC® Alpha® insulation is highly durable and more stable than other synthetic insulation products, more open-construction woven face and back fabrics can be selected to create an air permeable package. This small amount of airflow rapidly draws moisture away from the body and allows POLARTEC® Alpha® to be worn in a wider range of activities compared to classic "vapour barrier" style insulation.

BENEFITS:
- superior breathability
- warmth without weight
- packable
- quick drying
- easy-care
- available in multiple styles and weights

POLARTEC® Delta™



POLARTEC® Delta™ is POLARTEC's first cooling fabric. It is a permanent mechanical wicking synthetic fabric inspired by the design of car radiators – it transfers heat and sweat away from your body and out to the air being blown across the outside of the fabric.

POLARTEC® Delta™ is ideal for fitness-based activities. It helps distance athletes in avoiding the discomfort of flash cooling of sweat-soaked synthetic garments, especially when the temperature drops or the wind picks up, but also it avoids the typical synthetic warm feeling that wearers have during a hot day or inside the gym.

POLARTEC® Delta™ is designed to navigate the middle ground of natural and synthetic fibres, taking comfort cues from cotton for immediate and long term cooling ability, and synthetics for their fast dry time, reduce wet cling and chafing.

Delta™ is constructed as a radiator: its typical structure facilitates the transfer of heat from the body, and manages sweat at skin contact. It is designed with hydrophilic yarns knitted in a radiator matrix to prolong the skin's natural cooling response. This yarn absorbs and distributes water/sweat around the fabric. Hydrophobic zones made of synthetic yarns with a special knit construction promote maximum breathability and a quick drying time. The special knit structure reduces wet skin cling.

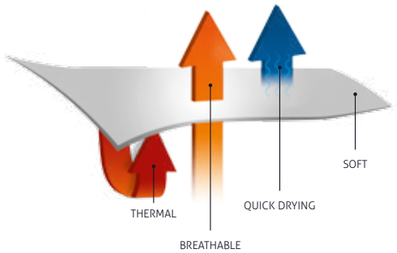
BENEFITS:
- long term cooling ability
- absorbs and distributes water/sweat around the fabric
- breathability
- quick drying

polarlite
THERMAL TECHNOLOGY

POLARLITE is SALEWA's proprietary fleece. It reflects our long-standing experience with and enthusiasm for this lightweight, quick-drying insulation fabric.

POLARLITE comes in various weights and with different characteristics: stretch, microfibre, body-mapping, printed fleece. It covers all bases when it comes to mountain sports.
We design our POLARLITE garments with specific activities in mind. POLARLITE is warm, lightweight and comfortably soft. It's ideal for insulating outer layers or mid layers and can even be worn next to the skin. POLARLITE textiles are compressible, quick drying; breathable and easy-care, which makes them ideal for mountain sports.

BENEFITS:
- warm
- lightweight
- abrasion-resistant
- soft
- packable
- quick drying
- easy-care

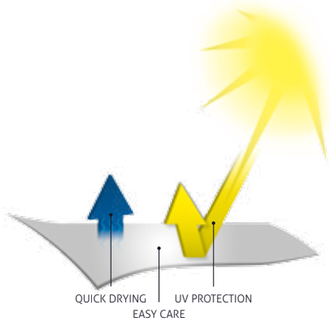


DRY'TON

DRY'TON is SALEWA's proprietary, easy-care, durable and resistant synthetic fabric with a natural feel.

DRY'TON is extremely functional. It is designed to transport moisture rapidly away from the body to evaporate efficiently. Moisture on the skin is quickly removed. This protects the wearer from overheating during physical activity and from overchilling during rest breaks or once activity has ceased. It is available in a range of different fibres, blends and constructions, including with UV protection. We use it to make base layers, mid layers and pants, shorts and linings among other things.

BENEFITS:
- breathable
- easy-care
- lightweight and comfortable
- durable
- natural feel
- extremely functional moisture management properties
- quick drying
- many versions bluesign® certified
- high UV protection options available



LIGHTWEIGHTS & FUNCTIONAL FABRICS

CORDURA®
FIBER TECHNOLOGY

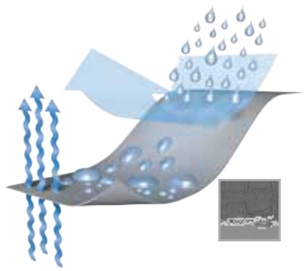
CORDURA® Naturalle™ fabrics provide a natural, cotton-like appearance and feel with durable, long lasting performance for technical outerwear and shell fabrics.

CORDURA® Naturalle™ fabrics are made with INVISTA qualifying full dull lustre yarns. They offer enhanced tear and abrasion resistance with a wide variety of apparel styling options.

TYPICAL FABRIC CONSTRUCTIONS:
- Lightweight plain, rip-stop and dobby weaves
- Circular, flat, or warp knit
- Two and three layer laminated fabrics and double weaves
- Can also be blended with wool for enhanced comfort, polypropylene for quick drying, and pararamids for added cut resistance

BENEFITS:
- look and feel of cotton
- durable, long-lasting performance
- stylish durability
- exceptional strength-to-weight ratio
- tear-resistant
- abrasion-resistant
- rugged performance,
- high tenacity full dull nylon yarns
- natural matt appearance
- available in a variety of weaves and knits

PERTEX QUANTUM



PERTEX QUANTUM is a lightweight shell fabric used for insulated clothing, sleeping bags and lightweight jackets and windshells. We use it for our mountaineering and outer layers.

PERTEX QUANTUM uses incredibly fine polyamide (nylon) yarns, precisely woven to make a very lightweight yet strong and durable fabric. It offers significant weight saving without making sacrifices on strength and abrasion resistance. Its softness also allows sleeping bag or jacket insulation to achieve more loft. It's also very breathable.

TECHNICAL SPECIFICATION:
- Composition: 100% Polyamide (nylon)
- Weight: <35g/m²
- Air permeability: 1.0cc (max)

BENEFITS:
- featherweight
- optimum strength to weight ratio
- windproof
- downproof
- breathable /air permeable

dri*release*®
cotton

DRIRELEASE® cotton is a functional blend of 85 % polyester and 15 % cotton. It is an eco-friendly solution that keeps the wearer cool, dry, fresh and comfortable in high-performance base layers, hiking or mountaineering apparel.

The blend of synthetic and natural fibres in DRIRELEASE yarn accelerates the water release rate of DRIRELEASE fabrics. They push water and perspiration to the outside of a garment and into the air faster than other performance fabrics available on the market. The added boost of FreshGuard, embedded in DRIRELEASE blends, delivers unmatched odor control.
Because fabrics made with DRIRELEASE technology do not alter their fibres with chemicals of any kind, its performance is permanent. It will not "wash out" over time. DRIRELEASE cotton has a patented combination of hydrophobic and hydrophilic fibres that allow them to engage with moisture naturally to dramatically improve how wetness is pulled from the skin and released into the air.

BENEFITS:
- functionality
- comfortable cotton feel
- removes perspiration fast
- dries 4x faster than cotton
- freshGuard prevents odor
- won't shrink or lose shape

RECYCLED POLYESTER

SALEWA is committed to using **RECYCLED POLYESTER** to make new garments.

Polyester is a synthetic fibre made from oil and commonly used in sports textiles for its ability to move moisture away, to dry quickly and to resist to abrasion.
About 65 to 70 % of global polyester (PET - PolyEthylene Terephthalate) production is used for textiles, the rest of it is usually made into plastic bottles and other packaging. Today, technology allows us to use RECYCLED POLYESTER to make new garments. Indeed, PET such as plastic bottles, is collected (from recycling bins) washed, flaked and dried. It is then melted, re-extruded and spun to create threads ready to be weaved or knitted in order to create new garments. It was found that this recycling process can save up to 30 - 50 % of the total energy needed to create PET. Recycled PET yarns have the same qualities and characteristics as standard PET and can be used alone or combined with other fibres to create a wide range of fabrics.

BENEFITS:
- environmentally-friendly
- recycled PET
- saves energy

COTTON

COTTON is a comfortable natural fabric.

We use COTTON both with and without stretch characteristics depending on the amount of freedom of movement the wearer requires. All our COTTON fabrics are easy to care for and hard-wearing. COTTON is ideal for summer use as it is extremely breathable.

BENEFITS:
- soft
- comfortable
- breathable
- durable
- easy-care
- available in stretch versions

ORGANIC COTTON

ORGANIC COTTON is eco-friendly, but has the same benefits as conventional COTTON.

COTTON generally enjoys a positive image, but its production process is not exactly environmentally friendly. Indeed, conventional cultivation uses large quantities of water and wide amounts of artificial fertilizers. This includes pesticides and other toxic chemicals to protect the crops from insects and diseases and encourage the plants to grow quickly. This has a negative impact on the environment (soil, groundwater and air).
ORGANIC COTTON is different. Its production is eco-friendlier and uses no pesticides. Water is not wasted and natural soil fertility management techniques are applied based on crop diversification and organic compost, mulch and manures.
Replacing conventional cotton with ORGANIC COTTON creates opportunities for small farmers to sell their harvest more easily. ORGANIC COTTON has the same benefits as conventional cotton: softness, comfort and hypoallergenic characteristics.

BENEFITS:
- organic
- environmentally friendly
- soft
- comfortable
- breathable

HEMP

HEMP is a natural fibre. Its fresh feel makes it pleasant to wear in summer. HEMP fabrics have a distinctive texture that gives colours an original look.

HEMP plants are versatile and grow extremely fast. HEMP can produce 250% more fibre than cotton using the same amount of land. It has a diminished environmental impact – HEMP keeps soil healthy and requires little water, energy or chemicals to grow. Neither weed nor crop protection measures are required.

HEMP has all the softness of a natural fibre, but is also very strong and durable. Clothing made of HEMP retains its shape for longer. Due to the porous nature of its fibres, HEMP absorbs moisture, for a cooler feeling on warm days.
HEMP is also naturally resistant to mould and ultraviolet light.

BENEFITS:
- environmentally friendly
- soft
- durable
- comfortable
- naturally resistant to mould and ultraviolet light
- distinctive look

LINEN

LINEN is an attractive natural fabric that is pleasant to wear. It feels cool to the touch and is breathable as its weave allows air to flow. LINEN is highly absorbent and will quickly remove perspiration from the skin. In addition, it can absorb a fair amount of moisture without feeling unpleasantly damp, unlike cotton.

LINEN is ideal for use in summer, when travelling and/or in hot and humid climates.
LINEN is heat conductive – it allows heat to escape quickly, further improving cooling. In addition, LINEN reflects heat, so it has "shading" characteristics too. Linen is a very durable, strong fabric, and one of the few that are stronger wet than dry. We use it to tailor our travel shirts, pants and shorts.

BENEFITS:
- cool
- breathable
- lightweight
- durable

BIONIC-FINISH® ECO

BIONIC-FINISH® ECO is an environmentally friendly hydrophobic finish inspired by nature. BIONIC-FINISH® ECO repels water and aqueous soiling substances. It is wash-resistant and suitable for all fibre types.

This fluorine-free treatment is applied to fabrics to make them water repellent. Durable hydrophobic finishes are usually based on fluorocarbon resins, which are not biodegradable and are toxic to plants and animals. BIONIC-FINISH® ECO is a clean and effective alternative to fluorocarbons. Laboratory and field tests have proven that this hydrophobic finish is the best, new alternative treatment to avoid using fluorocarbons.

BENEFITS:
- no fluorinated compounds
- formaldehyde-free
- highly water-repellent
- effects are resistant to abrasion and wear
- improves sewability when making-up
- high wear comfort membrane technology
- no effect on breathability
- already effective when tumble drying after home laundry
- cost-effective alternative to fluorocarbon resin finishing

ECOYA®

ECOYA® is an eco-friendly dyeing process.

The dyeing process is one of the most polluting parts of the apparel production process. It is a lengthy multi-phase procedure that uses large amounts of chemicals, water and energy. ECOYA® was introduced in 2007 as a more sustainable alternative to the conventional dyeing process. With ECOYA®, natural pigments are added to the polymer melt before it is extruded into yarn. ECOYA® fabrics use substantially less chemicals, water and energy. Unlike conventional yarn or piece-dyed fabrics, where the dye is only on the surface, ECOYA® yarn is coloured from the inside out. This results in a more colourfast fabric that stands up better to light, water and washing.

BENEFITS:
- saves water
- reduced CO2 emissions
- reduced COD emissions
- saves energy
- less chemicals

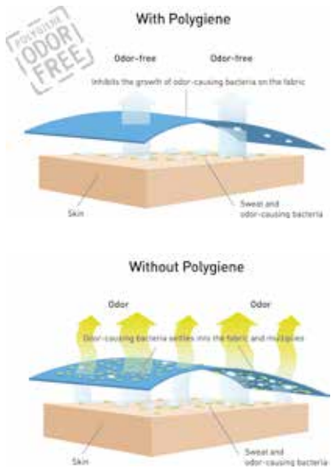
Polygiene®

POLYGIENE® is a fabric technology that inhibits the growth of odor-causing bacteria.

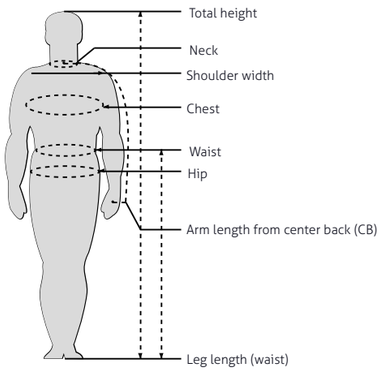
POLYGIENE® is applied at the finishing stages of textile production. It uses low concentrations of silver salt (silver chloride), which has antimicrobial properties and is naturally present in water and soil, to safely eliminate the ability for bacteria and fungi to grow.

Odor control for the lifespan of the garment is made possible as the technology is bound and permanently integrated in the fabric and will not wash out.
POLYGIENE silver salt technology is only active on the textiles itself. With a heritage in the healthcare sector, POLYGIENE has applied its expertise and testing to ensure that it has no affect on the natural bacterial flora of the skin. POLYGIENE is not nanosilver.

BENEFITS:
- prevents odors
- permanently integrated odor control
- does not interfere with the skin's natural bacterial flora
- environmentally friendly: wear it longer and wash it less
- hygienic: less bacteria, less infections
- long lasting: eliminates bacteria that break down synthetic fibres
- saves weight: pack less apparel on multi-day treks



SIZING CHARTS



All of our fits are developed considering our body measurement chart and the end use of the garment within a layering system.

ATHLETIC FIT: sporty ergonomic fit with freedom of movement for the intended activity
REGULAR FIT: normal fit – comfortable, slightly ergonomic with freedom of movement
SLIM FIT: slim fit – closer to the body fit than our regular fit
RELAXED FIT: relaxed fit – looser fit than regular fit
ARMOUR FIT: suitable for wearing protection underneath
